

DPC INJECTION CREAM & GUN –Code :BD2

Description

A blend of silane/siloxane cream emulsion that reacts with moisture to form a highly effective hydrophobic barrier against rising damp in masonry structures. Produced as a viscous cream that remains within the drilled hole and does not leave unsightly staining.

Features

- Simple and easy to install.
- Supplied in 600cc foil cartridges with a special Bulk Injection Gun available.
- The cream is inserted into mortar beds; one full pull on the trigger will insert sufficient cream for one 12 mm hole in 4½-inch brickwork, two pulls of the trigger for 9-inch brickwork etc.

Benefits

- Solid brick walls can be drilled from one side only to the prescribed depth.
- Cavity walls can be treated separately by drilling each leaf, at the same height, as for solid construction walls.
- Clean, quick and easy to use
